

# How the us lost the solar power race to china

Why did America fall as a solar superpower?

The fall of America as a solar superpower is a tragedy of errors where myopic corporate leadership, timid financing, oligopolistic complacency and policy chaos allowed the US and Europe to neglect their own clean-tech industries. That left a yawning gap that was filled by Chinese start-ups, sprouting like saplings in a forest clearing.

Does the US dislike China's dominant position in the solar industry?

If the US (or any country) dislikes China's dominant position in the solar industry, there are still potential openings on many fronts to make better products and win back the market. And as the article explains, the solar energy industry somewhat lacks the strategic importance that fossil energy had in the past.

Is China dominating the solar industry?

China is dominating the solar industry- which is seen becoming the world's biggest source of electricity by 2031. Bloomberg Opinion's David Fickling explains how everyone else got left behind, including the United States. -- China is dominating the solar industry - which is seen becoming the world's biggest source of electricity by 2031.

Why did the USA lose all the PV production to China?

Also that PV panel prices are just 5% of what they were in 2011! So the reason described in the article for the USA to loose all that future PV production to China from around 2013 onwards : a small group of companies hoarding the market control, boasting about their huge profits, and restricting supply to inflate demand.

Will China become the world's biggest source of electricity by 2031?

Bloomberg Opinion's David Fickling explains how everyone else got left behind,...

Why is China still using a lot of non-solar power?

China is still using vast amounts of non-solar power. The biggest factor was probably that China needed to greatly increase their total power production to meet their current needs, while the US has plenty of existing power production. Only a few years ago China was rationing power to various industries.
