

How do solar panels connect to the grid?

Connecting solar panels to the grid can be done through a line or supply-side connection. This involves connecting the solar panels directly to the main electrical supply of your home. As a result, the solar panels' electricity can power your home's appliances and other devices.

How does a grid-tied solar system work?

By connecting to the grid, you can send any extra energy your solar panels produce back to the grid. This process, known as 'net metering' or 'net billing,' could result in credits on your electricity bill. In a grid-tied system, your solar panels are directly connected to the utility grid.

What type of meter is needed to connect solar panels to the grid?

To connect solar panels to the grid, you need to install a bi-directional meter on your home.

What is the most common connection for a grid-tied solar panel system?

The most common connection for a grid-tied solar panel system is a "LOAD SIDE" connection, made AFTER the main breaker. Always refer to the NEC code in effect or consult a licensed electrician for safety and accuracy. There are two basic approaches to connecting a grid-tied solar panel system, as shown in the wiring diagrams below.
