

How can I get solar energy into my home?

Solar energy is a key way to get more from your property, insure yourself against power outages, and save some money. You can get solar energy into your home by installing panels on your roof, which is the most obvious method. However, there are other options as well.

How do I choose the best way to use solar electricity?

Before deciding on the best way to use solar electricity at home, assess the potential solar energy that can be produced at your address. Because PV technologies use both direct and scattered sunlight to create electricity, the solar resource across the United States is ample for home solar electric systems.

Are solar panels right for my home?

We have the answers to all your burning questions to help you decide if solar panels are right for your home. Solar panels can generate cheap and clean energy. Here is everything you need to know. Throughout the country, residential solar panels have become an increasingly popular option for generating energy for homes.

Can I install solar panels myself?

It is possible to install most of a solar panel system yourself -- mounting the panels on your roof and connecting them to each other. But if your home is connected to a grid, you'll need to hire a licensed electrician for the final connection needed to feed electricity to your utility.

How do I choose the right solar panels for my home?

To choose the right solar panels for your home, consider the 3 main types: monocrystalline, polycrystalline, and thin film. Monocrystalline panels are the most recognizable and have about 20% efficiency. They are the most expensive but take up the least amount of space.

What do you need before installing solar panels?

Before installing solar panels, contact your electric provider and ask them if they offer grants or discounts for solar panel installation. Once you have your solar panels picked out, you can install the mounting system on your roof or on the ground.
