

What is a solid waste container?

Solid waste does not necessarily mean solid material, but rather anything that can be discarded without causing harm to human health and the environment. The following containers are typically used to haul non-toxic waste, such as garbage, debris, scrap, ocean/lake water and recyclable materials.

What types of containers are used to haul non-toxic waste?

The following containers are typically used to haul non-toxic waste, such as garbage, debris, scrap, ocean/lake water and recyclable materials. Rectangular containers can be found in different sizes and grades to best fit the hauler's needs.

Where can I find garbage cans and bins?

You can find garbage cans and bins in our dedicated section of Waste Containers at Busch Systems. We offer indoor & outdoor waste containers for restaurants, offices, & industrial business spaces.

How do I choose the right container for my project?

Industries that deal with such waste are legally obligated to store the waste in containers before transporting it to the waste disposal site or a recycling facility. When selecting the right container, the key points to remember are the size, material and design that suits the waste produced by your project.

How big should a waste container be?

Ideally, the size of the container should only be slightly bigger than the quantity of waste. o It is not advisable to place incompatible waste in a single container and a supervisor must first approve the mixing of any materials. The type of waste must be compatible with the container's material itself to prevent corrosion and leakage.

What are the types of waste containers?

Types of Waste Containers Heavy industries such as construction and oil and gas produce large amounts of solid, liquid and gaseous waste, which could be hazardous. Demolition jobs and agricultural activities on the other hand produce non-hazardous waste. Choose the containers from the list below based on the application. Roll-off containers/boxes.
