

Are solar panels worth it in Illinois?

This policy makes solar panels far more valuable in Illinois, increasing the return on investment you'll likely see over the lifespan of your solar energy system. Solar panels will only produce energy when they're exposed to direct sunlight.

How much does solar cost in Illinois?

Most Illinois residents pay around \$25,800 for solar panels before any incentives, and the average homeowner saves approximately \$21,699 after the system pays for itself. Installation expenses are lower than the national average, and the average electricity rate in the region makes solar adoption a great investment for most Illinoisans. 2

Should I get solar in Illinois?

Getting solar in Illinois is a smart and eco-friendly move. Going solar is cheaper here than in many other states, and Illinois offers tax incentives to help make paying for your system easier.

Do solar panels increase home value in Illinois?

The exact increase in value varies by location, with homes in active solar markets sometimes seeing even higher boosts. Cheaper energy bills: The average homeowner in Illinois uses a lot of power, which adds up to a lot of savings when you switch to solar.

Why should Illinois homeowners consider solar?

Installing solar not only lets you tap into clean energy, but it also helps you become less dependent on your utility company and fossil fuels as a whole. You'll be able to reduce air and water pollution and help fight climate change, all while enjoying lower energy fees. What Should Illinois Homeowners Look Out For When Considering Solar?

How much does a 7 kilowatt solar system cost in Illinois?

On average, a 7-kilowatt (kW) solar system generates about 7,665 kilowatt-hours (kWh) to 11,498 kWh per year. For 2024 and 2025, REC prices for an average residential 7-kW solar system are \$73.71 to \$83.87. So, the average Illinois homeowner could earn an estimated \$564 to \$964 per year.
