

What is a community solar program?

Or it could be a community solar program, which allows residents to subscribe to a shared solar project within the community. These kinds of projects visibly demonstrate a local government's dedication to climate action. The clean electricity they provide to municipal facilities and residents can reduce community-wide greenhouse gas emissions.

How can local governments support community solar?

There are several steps that local governments can take to build support, enable greater access and expand the range of benefits associated with community solar. Solar panels installed on a resort hotel in Anaheim, California. The city of Anaheim provides billing discounts to eligible LMI community solar program participants.

Who is involved in a community solar project?

Community solar products may also include nonfinancial benefits, such as environmental benefits (e.g., renewable energy certificates). There are always at least four actors in a community solar project: the host, the sponsor, the utility, and the subscribers. The host is the owner of the location where the community solar project will be located.

Can a community solar system bring clean electricity to renters and low-income communities?

To bring clean electricity to renters and low-income communities, cities are launching innovative community solar programs, which allow residents to purchase a share of a solar installation and reap the benefits of clean energy (including cost savings) without having to physically install panels on their property.

Why are local solar projects important?

Many are using local solar projects to achieve broader community benefits and align with other priorities. These include saving money, creating local jobs, expanding renewables access to low-income residents, and advancing local resilience. Generating wind and solar is increasingly more competitive or cheaper than other forms of energy.

How does a community solar project work?

The utility measures the energy produced by the solar project and distributes the power via the electricity grid. The subscribers are the individuals, businesses, nonprofits, or local governments that purchase a share of the electricity generated by the community solar project.
