

How do you mount a solar camera on a wall?

Align the holes on Bracket with the holes on holder, then lock the screws. Page 33 7.4. Mount the solar panel or camera on the wall Drill 6 holes on the wall, then put the blasting screws inside. Align the bracket holes with blasting screws, and lock it with the nuts. View and Download Sunwebcam Solar 4G Camera user manual online.

What if the power of the camera is low?

When the power of the camera is lower than 10%, the camera will automatically turn off PIR and other power-consuming functions. It is the most energy-saving and efficient working mode. When the mobile phone is not remotely monitored, the camera is in standby mode.

What is the default mode of the camera?

The default mode is low power consumption mode. When someone passes by, the camera will automatically start recording for 15 seconds. When the person is in the monitoring range, the camera will keep recording. The built-in battery of the camera can work for 6000 wake-ups, and the solar energy supplements 250 wake-ups per hour.

How to connect a local camera to a router?

Local Camera Open the 4G CMS app, click the local device, you will see the camera after you drop down to refresh the list. 4.2.3. Set the camera to connect to the router Set the camera connect the Wi-Fi. Click the button, you can see the device information, click the setting button, choose the wireless Network Parameters, open the Wi-Fi client.

also ensures ultra-low power consumption for reliable camera performance. *Different models of camera setups may have slightly different structural design. Junction box ...
