

How can I use solar energy in Minnesota?

Get educated: Solar can generate electricity, heat water, or help heat your home. Making electricity is the most common use of solar energy in Minnesota today. Learn about solar through sources such as the Clean Energy Resource Teams (CERTs) and the U.S. Department of Energy (DOE). Take a class on solar basics.

Is solar power a good option in Minnesota?

Generally speaking, solar power is well-accepted in Minnesota, along with other renewable energy sources. The state is relatively environmentally conscious, with a Renewable Portfolio Standard (RPS) goal of producing around 26% of its energy production via clean energy sources by 2025.

How much do solar panels cost in Minnesota?

However, most Minnesotans require a smaller-than-average system of just 8 kilowatts, bringing the total price to around \$20,160 after the federal tax credit is considered. Solar panels are more valuable in areas where energy needs or electricity rates are high. The price of electricity is around average, and the energy consumption is below average.

How much energy does Minnesota use a month?

Homeowners in Minnesota use an average of 775 kWh per month, which means most residents will see a return on investment from going solar. You can check your past utility bills to determine your average monthly consumption. If yours is less than 500 kWh per month, you might want to reconsider going solar.

How Much Is It To Go Solar in Minnesota?

Should you buy a solar home in Minnesota?

After your home is energy efficient, you are ready to explore solar. But before you buy, take these steps: Get educated: Solar can generate electricity, heat water, or help heat your home. Making electricity is the most common use of solar energy in Minnesota today.
