

Can I mix pylontech batteries?

I doubt that the installers you met, know better than the guys who make those batteries. According to Pylontech support, you can mix them, just contact Pylontech support if in doubt.

Can pylontech BMS system work with US2000 & US3000 batteries in parallel?

The answer is Yes, it is possible to create a system with US2000 and US3000 batteries in parallel. Pylontech BMS system will auto-adjust the charge current and voltage, protecting the batteries from over charge or high temperature. Parameter settings - Master/Slave Configuration

Can a Polytech up5000 battery be connected to a pylontech battery?

Hearsay and speculation at best. Get advice from someone who knows. Or you can simply download the UP5000 manual. The Polytech is compatible with the US series and you can connect different sized batteries together. I have a Victron 5KVA 48/5000 Multiplus II inverted and a single Pylontech 48V, US3000 battery connected to it.

Can I mix pylontech US2000 and US3000 in a single installation?

Can I mix Pylontech US2000 and US3000 in a Single Installation ? The answer is Yes, it is possible to create a system with US2000 and US3000 batteries in parallel. Pylontech BMS system will auto-adjust the charge current and voltage, protecting the batteries from over charge or high temperature.

How many batteries can a pylontech battery support?

In addition, since US3000B only supports up to 8 in parallel, when the number of batteries is more than 8, US3000B (and the same for US2000B) should be set in the 2-8th position. I have found that Pylontech batteries are generally shipped at around 60% SOC, so you should always add new batteries when the existing batteries are close to 60%.

Can I use a US3000 battery with a pylontech us5000?

The US2000 series is no longer available, and the only US3000 battery I could source was the US3000B (which seems strange). I was able to find some compatibility guidelines in the Pylontech US5000 manual. When there are US3000C and US3000B in the system, you must use US3000C as the master battery.

I've seen on the Pylontech FB groups you can mix US5000's with the US3000, but not sure on the UP5000. 2023/09/23, 02:05 PM #3. bees. View Profile ... Here is a good resource and place to ask about Pylontech batteries and mixing and matching them. Can be done, but at times the firmware's are the challenge to get sorted first. <https://www.facebook.com/groups/pylontech/> ...

I'm not sure how pylontech control the mixing of different battery sizes, perhaps it's limited to the max the smallest battery can accept x number of batteries. When I expanded my setup I was offered the brand new US5000 ...

Most errors stem from miscommunication between the system and the new Pylontech battery. These can be quickly resolved by troubleshooting the system, and ensuring all connections and settings are correctly ...

Hi, I have a Victron 3f setup - 3x Multiplus, 2x MPPT charger and 3x Pylontech 3000 and Cerbo. As a tech hobbyist I'm looking forward to extend my capacity with a custom 15S LiFePo4 pack to match Pylontech battery voltage and a BMS that can talk to the Cerbo via CANbus to provide the system with battery data similar how ie. Pylontech does that.

Pylontech US5000C Lithium Ion Battery 4.8kWh 48V 100Ah. The Pylontech US5000C is a state-of-the-art lithium-ion battery designed to provide 4.8kWh of energy storage, offering exceptional performance for solar and off-grid ...

Hello everyone. I wanted to know if anyone had experience or knowledge in regards mixing new and old lithium ion LiFePo4 batteries. I am considering an installation with 1 battery module from Pylontech or BYD (around 2.5 kWh) with the possibility of upgrading the system within a few years with more modules.

I have a 5 year old Pylontech US3000C that's working well connected to a Must hybrid inverter that can't read the SOC - it's been operating mostly in UPS mode without any issues. I'm thinking of either adding an additional 3000C to allow for higher amp capacity. Is there any issue with connecting...

Yes, it is generally possible to mix Pylontech batteries of the same model and capacity. Pylontech batteries use a modular design, where multiple battery modules can be connected in series or parallel to create a larger battery bank. As long as the modules are of the same model and capacity, they should be compatible and able to work together.

Mixing Pylontech 3000 and 3000C using LV-Hub. Hi, Extending a Pylontech battery from 4 US3000 to 4xUS3000 + 8xUS3000C using an LV-HUB. Connecting to Cerbo GX via BMS cable type B. So far not able to make the Cerbo see all 12 batteries (Total capacity and live currents) at the same time. I can get up to 8 batteries showing by eliminating the LV ...

Mixing Pylontech US3000C and US3000B batteries in the same system I was able to successfully upgrade an existing system that used 4 older US3000C batteries together with 6 new US3000(B) batteries. (Total of 10 batteries) The first two batteries, including the master, were US3000C, then the next 6 batteries were US3000(B), and the last 2 batteries were US3000C. ? ...

Same batteries few tweaks here and there but difference in batteries is as follows 1: pylons can mix and match 2.4 and 3.5 modules 2: dyness cannot mix and match so ur forced to stick to battery stack eg 2.4 to 2.4 or 3.6 to 3.6 and so on 3: the dyness is 3.6 vs the pylon 3.5 4: price! price! price!

This post is to document my findings with using different Pylontech batteries on a Goodwe 4.6kW ES inverter

(GW5048D-ES). My initial install had the inverter connected to 1 x US2000 battery. This worked well but was only able to supply ~1.2kW (as this is a 0.5C battery). Later I added a second US2000 battery.

Depending on how the batteries are wired and whether there is a connection box between the batteries, your charging currents are going to be a little odd. I am no PylonTech or Growatt expert, mostly work with other brands, ...

Lithium batteries come in all shapes and sizes, but for some applications such as the larger residential and commercial energy storage market it can make sense to have a modular, stackable 19" format battery system. ...

On my Dyness, which is similar to Pylontech, the Master is OFF-OFF-ON-OFF, and all Slaves are OFF-OFF-OFF-OFF. Would also suggest moving the negative from the inverter to the top battery, leave the positive from inverter on bottom battery, rest of the power cables as is. (Edit, I see you have them correct in option 2 pic, so can leave like that).

Good day, does anyone have experience in connecting different series Pylontech batteries? I was selling my existing 3 x US3000 batteries then found out that it is okay to mix different series batteries as per other posts and ...

General Battery Discussion . Mixing Pylontech with Seplos or Fogstar. Thread ... Mixing Pylontech with Seplos or Fogstar. Thread starter scobo; Start date Jul 2, 2023; S. scobo New Member. Joined Jun 12, 2023 Messages 30 Location UK. Jul 2, 2023 #1 Anyone ever tried connecting a Fogstar or Seplos battery to a Pylontech in parallel ?

I have five Pylontech US5000 batteries, which I wish to charge as quickly as possible from three SmartSolar MPPT RS 450/100 units (with around 22kWp of PV), to make ...

I have a Victron 5KVA 48/5000 Multiplus II inverted and a single Pylontech 48V, US3000 battery connected to it. I would like to get another battery, but I'm not certain whether ...

The answer is Yes, it is possible to create a system with US2000 and US3000 batteries in parallel. Pylontech BMS system will auto-adjust the charge current and voltage, protecting the batteries ...
