

Does Montana have a solar tax credit?

Montana does not have a state solar tax credit. However, homeowners can take advantage of the federal solar tax credit, which allows you to deduct 30% of your solar installation costs from your federal income taxes. That's thousands of dollars in savings!

What is the cost of solar in Montana?

The cost of solar in Montana for a typical system is about \$20,286 after the federal tax credit, with residents paying an average of \$3.22 per watt.

Does Montana have a solar rebate?

While Montana does not have a dedicated state rebate for solar panel installation, some manufacturers offer their own solar rebates. These programs are usually available for a limited time or in certain geographic regions, so check with an installer to see what's available to you. Montana does not have a state solar tax credit.

Do solar panels save energy in Montana?

Montana receives about 201 sunny days per year, which is in line with the national average of 205 sunny days. Solar panels are only as efficient when they receive direct sunlight, so homes in Montana that get a lot of sunlight will have a higher potential for energy savings with solar panels.

Are solar panels tax deductible in Montana?

In Montana, the cost of installing solar panels is tax deductible up to 30% through the federal tax credit (ITC). The exact amount for Montana homeowners would be approximately \$8,694.
