

Municipal solid waste container reporting marks

What is municipal solid waste (MSW)?

Municipal solid waste (MSW) includes both durable (such as discarded furniture and appliances) and nondurable goods, containers and packaging materials, food wastes, yard trimmings, and other organic waste materials originating from residential, commercial, institutional, and industrial sources.

Why is municipal solid waste a problem?

Municipal solid waste (MSW) is the main source of waste, accounting for the vast majority of urban environmental sanitation expenditure, and seriously hinders the harmonious development of society and the environment. The existing capacity and means of MSW treatment can no longer keep up with its growth rate.

Does municipal solid waste have a physical component?

Uncertainty analysis of MSW's physical components was estimated. Recommendations for MSW's management were proposed. Municipal Solid Waste (MSW) is a heterogeneous waste stream, which is harmful for human health and the ecological environment if it is not well managed.

What are the regulations for municipal solid waste?

In order to accelerate the implementation of eight pilot cities, the Ministry of Construction (MC) has established some regulations. These regulations include "The classification signs for municipal solid waste" (GB/T19095-2008) and "Classification and evaluation standard of municipal solid waste" (CJJ/T102-2004).

What are the characteristics of municipal solid waste management (MSW)?

Information about the quantity and composition of MSW shows that the characteristics of MSW are similar, which are low calorific value, high moisture content and high proportion of organisms. Differences which exist among the eight cities in municipal solid waste management (MSWM) are presented in this paper.

What is Shanghai's new municipal solid waste classification policy?
