

Will solar power reach Nebraska?

Long after wind power's arrival, large-scale solar energy is reaching Nebraska, with the first major project going on line next year. The 81-megawatt project will supply power to the Omaha Public Power District through solar panels situated across 500 acres. Six other large-scale projects are in the works, including the one in Lancaster County.

Does Nebraska have wind energy?

Wind energy in Nebraska is not new -- the state's first turbines were installed 25 years ago-- but it's seen a spurt of growth, with a third of the wind energy facilities in the state having come online in just the last five years, thanks in part to near-complete deregulation of its development.

What percentage of Nebraskans want more wind energy?

In 2015, the University of Nebraska-Lincoln found 75% of rural Nebraskans wanted increased investment in wind energy; in 2022, that number was 45%. State Sen. Tom Brewer represents the largest district by area in the state, home to the Sandhills and much of the Nebraska Panhandle.

Is Nebraska poised for growth in solar energy?

The sun rises above a corn field in southern Lancaster County. Nebraska is poised for growth in solar energy in the coming years, as multiple large-scale projects are planned in the state. If all seven of those projects come on line, they would equal about 18% of Nebraska's electric generation capacity as of 2021. (Courtesy photo)

Is wind energy waning in rural Nebraska?

Despite the expansion of wind energy, public support for it in rural communities appears to be waning, even amidst increasing alarm over the effects of climate change. In 2015, the University of Nebraska-Lincoln found 75% of rural Nebraskans wanted increased investment in wind energy; in 2022, that number was 45%.

Are wind turbines bad for Nebraska?

Wind turbines take advantage of reliably blustery winds across Nebraska. They release no air or climate pollution, but they alter landscape views. If built close to homes, they can have noise impacts on the residents and create strobe-like flicker effects. Nebraska is a prime location for wind energy. Photo courtesy Village of Petersburg.

According to data released last week by the American Clean Power Association, Nebraska currently hosts 3,647 MW of operational wind, solar, and battery capacity, enough to ...

Nationally, electricity generated from solar and wind grew 16% from 2021, with wind accounting for about 74% of that, per Climate Central's "WeatherPower Year in Review: 2022" ...

Wind and solar support Nebraska landowners with \$37.9 million in annual land lease payments Nebraska

renewable energy projects have attracted \$7billion in capital investments

We specialize in residential and commercial installations of PV Solar and small wind. This is a picture of the installation we recently finished in Gering Nebraska. This is a residential 5 KW PV Solar installation using LG ...
