

What is a residential solar system?

Residential solar systems utilize photovoltaic (PV) panels to convert sunlight into electricity, powering your home with renewable energy. These systems typically include solar panels, an inverter to convert direct current (DC) to alternating current (AC), and sometimes a battery for energy storage.

What is a solar PV residential system?

These systems typically include solar panels, an inverter to convert direct current (DC) to alternating current (AC), and sometimes a battery for energy storage. The solar PV residential systems can power your home directly, store energy for later, or send excess energy back to the grid.

Should you go solar when building a new home?

If you're thinking about going solar, there's no better time than during the design process for your new home. When you incorporate solar into your new home's construction, you take advantage of solar's environmental and financial benefits without having to retrofit your home with a solar installation later down the road.

Can solar panels power a home?

Yes, solar panels can power a home. They are used to power everything from calculators to sports stadiums to satellites.

How do solar panels generate electricity?

Solar panels work by converting sunlight into an electric current. When sunlight hits the panels, it creates this current, which is first used to power electrical systems in your home. If your panels are producing more electricity than your home is using, the excess is stored in a battery and/or pushed onto the local energy grid to power your neighbors' homes.

What can solar panels power?

Solar panels are used to power everything from calculators to sports stadiums to satellites. They can just as easily be used to power a home. You don't need to be a rocket scientist - or anything close to it - to get solar panels for your home.

If you're thinking about going solar, there's no better time than during the design process for your new home. When you incorporate solar into ...

Homeowners can run their homes using solar power instead of taking energy from the grid, which lowers energy bills and carbon footprints. A home solar energy system costs between \$18,000 and \$20,000 before any incentives and ...
