

Was Tesla into solar power before it became fashionable?

Yes, Tesla was into solar power even before it became fashionable. He saw two ways in which this could be achieved - "either to turn to use the energy of the sun stored in the ambient medium, or to transmit, through the medium, the sun's energy to distant places from some locality where it was obtainable without consumption of material."

What did Nikola Tesla believe in?

Tesla believed that tapping into the natural forces of the earth, such as wind, solar, and hydroelectric power, would be essential for the future of energy production--a vision that aligns with today's efforts toward sustainable energy. Nikola Tesla's inventions and ideas have left an indelible mark on the world.

Why did Nikola Tesla write the article 'the problem of increasing human energy'?

Nikola Tesla wrote an article in 1900 for Century Magazine entitled "The Problem of Increasing Human Energy with Special Reference to the Harnessing of the Sun's Energy." It is often referred to as a philosophical treatise in which Tesla taps into his genius and acquired knowledge to address how to satisfy humanity's increasing need for energy.
