

What is off-grid solar power?

Off-grid solar power means no more monthly bills - just clean, reliable, and sustainable energy generated on your property. Unlike grid solar power, which supplements your existing connection, an off-grid system is entirely independent of the power grid.

Should you install an off-grid solar system in NZ?

Imagine living free from the constraints of the grid, generating your own energy, and embracing self-reliance. With an off-grid solar system in NZ, you can do just that. An off-grid solar system installation is a smart choice for those who live in an area where a grid connection is unavailable.

How much does an off-grid solar system cost?

For rural properties that have no current connection to the grid, installing an off-grid solar system will be cheaper than getting a grid connection, which normally falls around the \$100,000 range. However, if your property is connected to the grid, we recommend a grid-connected solar system.

How does an off-grid solar system work?

Operating independently from the grid, an off-grid solar system captures, stores, and converts sunlight to power your home. Here's how each component delivers complete energy independence. For off-grid systems, premium solar panels are essential, efficiently capturing sunlight and converting it into direct current (DC) electricity.

Do you need an off-grid Solar System?

Whether you live in a rural location without reliable grid access, or simply want to be more independent off the grid, we have an off-grid solar system to suit you. More and more customers are choosing to go off-grid, simply to gain complete energy independence, while protecting themselves against rising electricity prices from power companies.

What does it mean to live with off-grid solar?

Living with off grid solar means creating some new habits and new ways of thinking. The first step to energy freedom from the traditional power grid is to understand that power to your off-grid home or building is variable in nature. It's no longer going to be immediately available 'on tap' when you need it.

An off-grid solar system is a fully self-sufficient energy system that operates without any connection to the national electricity grid. It generates, stores, and supplies electricity ...

Our off-grid solar power packages below include everything you need to generate, store, and use power off-grid - solar panels, batteries, a charge controller, an inverter, and all the bits in ...
