

How does off-grid solar work in Queensland?

In Queensland, the sun shines for an average of 2,600 hours per year, making it an ideal location for installing off-grid solar. Off-grid solar systems work by using solar panels to convert sunlight into electricity. This electricity is then stored in batteries, which can be used to power your home or business even when the sun is not shining.

Who are off-grid solar installers?

We supply, design and install off-grid systems for clients throughout QLD, including those who are situated in remote areas without grid access. Our off-grid solar installers are in-house staff and certified by the Clean Energy Council (CEC), so you can have peace of mind knowing that your system will be installed correctly.

What is an off-grid energy system?

The Off Grid energy system means that you can have a standalone, independent electricity grid to power your home. This grid is self-sustainable and creates the power out of solar or wind sources. In Brisbane, solar lighting is the best idea because of the year-round solar power available.

What is an off-grid Solar System?

High performance, high quality off-grid solar systems. Standalone solar power solutions cater to individuals or businesses seeking independence from the conventional electricity grid. As experts in off-grid solar setups, we specialise in crafting, installing, and maintaining customised solar-powered standalone systems tailored to your needs.

Why are Queenslanders turning off-grid solar?

In Queensland, Australia's vast and sun-drenched expanse, the demand for reliable and sustainable energy solutions has grown exponentially in recent years. With the escalating concerns over climate change and the pursuit of energy independence, many Queenslanders are turning off-grid solar systems to power their homes and businesses.

Can a remote business benefit from an off-grid solar energy system?

Remote businesses, especially those in rural Queensland, can benefit greatly from a complete off-grid solution with battery storage. Your energy usage and requirements will determine the scale and design of the off-grid solar energy system that GES Energy will design and install for you.
