

Is there a solar tax credit in Oklahoma?

Oklahoma does not have a state-specific solar tax credit. However, the federal solar tax credit allows you to claim 30% of the cost of a new solar system on your taxes, effectively reducing the amount you pay by nearly a third.

How much does a solar system cost in Oklahoma?

On the bright side, you can still take advantage of the 30% federal solar investment tax credit (ITC). After using the full ITC, the average residential solar panel system is \$20,174 in Oklahoma, which is more expensive than in many other states. The national average is \$16,715. The average federal solar tax credit value is \$8,646 in Oklahoma.

Are solar panels tax deductible in Oklahoma?

Unfortunately, Oklahoma does not offer state sales tax exemptions for solar panel systems. However, you can still benefit from the falling cost of solar equipment and installation, along with the 30% Federal tax rebate.

How do I qualify for a solar rebate in Oklahoma?

To qualify for a solar rebate in Oklahoma, talk with an expert solar installer. They can guide you through the process. Additionally, the Federal rebate for installed solar systems is 30%. Oklahoma has no state income tax, so there are no state tax credits.

Do solar panels save money in Oklahoma?

After installation, you can earn credits for excess electricity production through Oklahoma's state-mandated net metering policy. Oklahoma residents who install solar panels save an estimated \$14,190 over 25 years. Some solar companies offer referral incentives, but Oklahoma has no statewide residential solar incentives.

What is the value of the federal solar tax credit?

The federal solar tax credit is 30% of the cost of your solar panel system if installed before the end of 2032. This includes the cost of equipment, labor, and permitting. Example: For a \$20,000 solar energy system, the federal solar tax credit would be $\$20,000 \times 30\% = \$6,000$.
