

Can a polysilicon solar panel charge a powermonkey extreme?

The Polysilicon solar panel offers photovoltaic efficiency up to 17% and features a USB output, fully supporting Apple iPhone/iPod, mobile phones and other 5V gadgets such as portable games consoles, handheld GPS systems, etc. The solar panel can fully charge the powermonkey extreme in approx 18-22 hours.

How big is a powermonkey extreme solar panel?

When the solar panel is folded it measures 170 x 91 x 18mm and the battery unit just 155 x 60 x 28mm - perfect for even the most space-conscious traveller. The Powermonkey Extreme features two output ports - a 5V USB socket and a 12V DC socket.

What is a powermonkey extreme solar charger?

The new Powertraveller PowerMonkey Extreme Solar Charger gives you power without boundaries. The PowerMonkey Extreme for 5 volt devices is the big brother to the very successful and highly regarded Powermonkey Explorer, a charger that has quickly become the flagship product of the Powertraveller range.

How much does a powermonkey battery cost?

The Powermonkey Extreme is an all-in-one solution for people who need all these capabilities. Most people are never more than 5 days from a wall outlet and don't need a solar panel to recharge the Extreme battery. You can buy a lot of spare phone batteries for \$200. Spare Android batteries cost under \$10 each.

How do I charge the powermonkey extreme battery?

The battery itself can be recharged either via the included universal mains charger, solar panel or via USB. The included solar panel will charge the Powermonkey Extreme battery unit in 18-22 hours in optimum light conditions.

How does the powermonkey extreme work?

The powermonkey extreme also has a solar energy detection feature which activates the incorporated state-of-the-art MPPT (maximum power point tracker) technology, allowing the solar panel to charge the powermonkey unit more efficiently in low light conditions.
