

What is charger 1?

Charger 1 is a fast vehicle alternator charger designed for 6X faster charging. It features smart car battery protection and compatibility with 95% of power stations, making it a reliable choice for efficient charging on the go.

Can You charge a car with a spare battery?

Electric car owners can use portable charging devices like ZipCharge or Roadie, along with non-electric car charging stations, to charge their vehicles using a spare battery. You can find general purpose power banks or a hybrid battery and J1772 charging cable for this purpose.

Which power stations are compatible with charger 1?

Charger 1 is compatible with all BLUETTI power stations, as well as third-party power stations or solar generators that use MC4 connectors for solar charging. Please note that in rare cases, third-party power stations may experience an unstable charging rate.

How long does it take to charge a 1kWh power station?

Full charge in just 5,5 hours, power through a long stay out there. Full charge in just 5,5 hours, never be left without power. The Charger 1 delivers up to 560W of power--6X faster than a traditional car charger. Now you can fully charge a 1kWh power station in just 2,5 hours, making it a game-changer for your on-the-go charging experience.

How does Charger 1 work?

Charger 1 features an intelligent algorithm that monitors the connected battery. It automatically stops drawing power from your car's battery 3-6 seconds after the engine is off, preventing battery drain.

What is the Blink portable EV charger 6?

The Blink portable EV charger 6 is a gasoline-powered device designed for recharging electric cars. Its price is 4-5 times higher than the average power generator. When chosen with the right parameters, it can be used to recharge electric cars, especially for on-road assistance. However, the charging speed is not high.
