

How does a strip solar pool heating system work?

Our strip solar pool heating system is an affordable and straightforward solution to keep your pool warm, extending your swimming season. Here's how it works: cold water is drawn from your pool and pumped through our strip solar collectors, where it absorbs the free heat from the sun.

How does solar pool heating work?

Solar pool heating is fundamentally simple. Water is pumped from your pool through a solar collector - basically either a series of rubber tubes (strip solar systems) or solar panels - which are usually mounted onto the roof of your house. As the water runs through the solar collector it becomes heated by the sun.

Does boss pool heating offer strip solar pool heating?

Boss Pool Heating offers efficient strip solar pool heating solution tailored for Australian climates. Our strip solar pool heating systems provide reliable heat while reducing your environmental impact. Contact us today.

How much does a solar pool heating system cost?

To buy and install a solar pool heating system generally costs between around \$3,000 and \$5,000. Of course, the cost of the system is directly proportionate to the size of your pool. Depending on the size of your pool and the sophisticated of the system, system kits range in price from around \$1,000 to a little shy of \$5,000.
