

Is Queensland a solar energy powerhouse?

True to its "sunshine state" label, there's no doubt Queensland is a solar energy powerhouse. According to Australia's Clean Energy Regulator, more than 962,990 small scale systems (<100kW) had been installed across the state as at the beginning of July 2023.

How does solar energy work in Queensland?

With 300 days of sunshine in Queensland each year, solar energy is a reliable way of meeting our energy needs. On days when there is no direct sunlight, ultraviolet (UV) penetration through the clouds still allows electricity generation, but at a reduced rate of 10-25% of their full capacity.

Why is solar power important in Queensland?

Added to this is the capacity of the many large-scale PV power stations popping up around the state. The Queensland Government has set a goal of 50 per cent renewable energy generation capacity by 2030 and solar energy plays an important role in this target.

Are solar panels a good investment in Queensland?

In Queensland, where solar power adoption is thriving, installing solar panels brings a lot of benefits. To help Queenslanders better understand the transition to solar energy, we shed light on the solar rebate scheme. Are you considering solar to save money on your home energy bills and utilise more sustainable energy sources?

How can I save money on solar energy in Queensland?

Maximise your savings by using as much of your solar energy as possible during the day. Excess energy exported to the grid earns feed-in tariff credits but at a lower rate (typically 6-10 cents per kWh) than what you'd pay for grid electricity. Queensland's feed-in tariffs vary by electricity provider.

How many homes in Queensland have solar panels?

According to the clean energy regulator, almost a million (962,917) or 1 in 5 Queensland homes and businesses have a solar system installed.
