

# Residential 120v electric car charging stations

What is the difference between a home charging station and EV?

Here are the differences between a home charging station and an Electric Vehicle (EV): A home charging station is connected directly to the electrical panel with a wire, while an EV is the vehicle itself. The installation of home charging stations is often considered cleaner and is best for EV drivers who have a sedentary lifestyle.

What is the cost of charging an EV at home?

Charging an EV at home is substantially cheaper than using DC fast-charging, typically costing around one-third as much. On average, an EV charger has an up-front cost of between \$400 and \$500. You'll want to charge at home as much as possible for convenience and cost savings.

What do you need to do to start charging your EV at home?

With electric vehicles (EVs), the process of charging at home involves a few steps once you arrive home. Plug the connector into your car's charging port. That's it! You can now enjoy the comfort of your home as your EV completes a charging session.

What are the different types of home charging for EVs?

There are three main types of home charging for electric vehicles (EVs): Level 1 and Level 2 charging, and DC fast charging. Level-1 chargers use a standard 120-volt outlet and can charge an EV overnight. Level 1 charges an EV more slowly, taking about 12 hours for a full charge on some models. Level-2 chargers use a 240-volt outlet and can charge an EV in about four to six hours. DC fast charging is not typically used for home charging, but is available at public charging stations for longer trips.

Who is the ideal user for a home charging station?

The home charging station is best for EV drivers who have a sedentary lifestyle. Here are the differences between the two: Here, the home charging station is connected directly to the electrical panel with a wire.
