

Do skmei watches work?

Skmei make some of the cheapest watches on the market - BUT, that does not mean that they don't work. They are based in Guangzhou in China, but are actually huge. They produce dozens of different models ranging from digital and dress watches, to smart watches and pedometers. Skmei is one of the most prolific watch makers in the low-end market.

How water-resistant is the Skmei watch?

The Watch is water resistant (up to 50 m) and it is recommended not to press any key underwater. Its material is high-grade which makes it beautiful and long-lasting.

Where is SKMEI Watch made?

SKMEI Watch's Headquarters are located in Guangzhou, where the factory has been producing watches since 2005. The brand was created in 2009. The factory covers over 8,000 square meters and employs more than 200 people in production, along with a BTB sales team of over 50 persons.

Is skmei better than casio?

Originally a Casio imitator (some of its designs came close to being exact copies save for the Skmei logo) Skmei now has its own designs as well. The digital is actually easier to read than some of the Casio analogue/digital designs where the digital display is tiny. This is a decent size and fairly easy to read at wrist level.

Why should I buy a solar watch?

This is a decent size and fairly easy to read at wrist level. Incredibly it also has solar power. Unlike more expensive solar watches the solar panel doesn't charge the battery and only powers the digital panel not the hands, but used in the light this will help extend battery life and you really are getting a lot for very little money.
