Are wind and solar energy a good investment?

Every single type of energy source has its cons, but if wind and solar power keep up their massive growth rates, they could very well find their larger share in the market. Especially if more private investors decide to grow these renewable energy sourcing, removing the need for government subsidies and slow implementations.

What is a downside of wind energy?

One of the biggest downsides of wind energy is the noise and visual pollution. Wind turbines can be noisy when operating due to both the mechanical operation and the wind vortex created when the blades are rotating. In order to use wind energy exclusively, wind turbines need to be paired with some sort of energy storage technology.
