

# Solar batteries vs generators choosing the best backup power solution

Are solar battery storage systems better than conventional generators?

Solar battery storage systems offer many of the same backup power functions as conventional generators but can run on clean energy instead of fossil fuels. We compare the costs, fuel sources, size, and maintenance requirements of battery backup options compared to conventional generators.

Is a generator better than a solar battery backup?

Compared to solar battery backup for power outages, generators are more affordable on the front end. Despite the low upfront cost, though, generators require regular maintenance and typically come with small recurring costs. Generators typically require weekly self-tests and need continual refueling to run during outages.

Should I buy a generator or a solar battery?

If your home's power needs are strictly emergency-based and solar isn't in your plans, a generator might be your go-to. However, for those leaning towards a greener, low-maintenance solution, solar + batteries are the way to go. What is a Generator? Generators and solar battery systems both provide backup power in the event of an outage.

What is the difference between a generator and a solar battery system?

Generators and solar battery systems both provide backup power in the event of an outage. The way they do it, though, is very different. Generators are the type of backup power systems most people are familiar with. Today, most generators run on liquid propane, natural gas, or diesel.

Should you buy a generator or a backup battery?

Upfront costs for backup batteries are typically higher than generators, but the lifetime savings can offset the upfront payment. You power solar batteries with the sun and can pull energy from them to avoid costly grid electricity. In contrast, generators require fossil fuels and only benefit you during a power outage.

Are solar batteries a good alternative to a gas generator?

Solar batteries can be a cost-effective and renewable alternative to a gas generator for backup power. Upfront costs for backup batteries are typically higher than generators, but the lifetime savings can offset the upfront payment. You power solar batteries with the sun and can pull energy from them to avoid costly grid electricity.
