

What is solar chimney power plant?

The present paper presents an overview of the main characteristics of a novel kind of solar thermal application called solar chimney power plant. It is a technology of electric power generation using solar energy by employing basic physics that when air is heated it rises.

Are solar chimney power plants reliable sources of renewable electricity generation?

Author to whom correspondence should be addressed. This research presents a comprehensive review of solar chimney power plants (SCPP) as a reliable source of renewable electricity generation. Solar chimney power plants differ from other renewable energy technologies because thermal and momentum effects result in 24-h electricity generation.

How a solar chimney power plant works?

There is a turbine in the chimney at a certain height from the ground. The kinetic energy of the system's air hitting the turbine blades is converted into electrical energy, and power output is obtained from the system. The simplified mechanism of the system is given in Figure 1. Figure 1. Solar chimney power plant scheme. 3.

What is a solar chimney system?

By considering the current definition of solar chimney systems, Professor Bernard Dubos designed the idea of solar chimney power plants in 1926 to be built on a mountain slope in North Africa. Besides this, the system's working principles and elements are included in the Dubos study .

How efficient is a solar chimney power plant?

In solar chimney power plants, the collector is the main element that transfers solar energy to the system. Therefore, the efficiency of the collector is significant. Although the collector's efficiency is influenced by its geometric parameters, it depends on the collector's material and harvested solar radiation.

When did Solar chimneys start generating electricity?

However, the idea of generating electricity from solar chimneys was first put forward by Spanish engineer Isidoro Cabanyes in 1903. By considering the current definition of solar chimney systems, Professor Bernard Dubos designed the idea of solar chimney power plants in 1926 to be built on a mountain slope in North Africa.
