

Will a solar storm cause widespread outages & damage?

Concern that a solar storm might cause widespread outages and damage is valid and documented. As we approach peak solar activity in 2025, solar storms may increase in frequency and intensity. An event of similar intensity to the Carrington Event will damage more than our power grid.

Do solar flares affect flight time?

One study indicates that during solar flares, flight departure delay time increases on average by 21% (eight minutes). Power outages A major coronal mass ejection in March 1989 (solar cycle 22) significantly interfered with the U.S. power grid and caused a nine-hour power failure in Quebec, costing US \$13.2 million.

What is a solar flare?

A solar flare is an intense burst of radiation, or light, on the Sun. These flashes span the electromagnetic spectrum -- including X-rays, gamma rays, radio waves, and ultraviolet and visible light. Solar flares are the most powerful explosions in the solar system -- the biggest ones can have as much energy as a billion hydrogen bombs.

Could solar storms damage the electric grid?

The possibility exists that, without protection, the electric grid is vulnerable to large solar storms that could damage large portions of the grid in ways that could conceivably take years to fix. Are solar flares a gray swan event?

Solar flares epitomize the concept of a gray swan event. Unlike black swans, which are unpredictable and exceptionally rare events with severe consequences (such as the 2011 Tohoku earthquake), gray swans like solar flares are not entirely unforeseen.

What happens during a solar maximum?

During the solar maximum, the sun unleashes powerful forces, including solar flares and coronal mass ejections, which can significantly disturb Earth's magnetosphere, leading to geomagnetic storms that may disrupt communication systems, power grids and satellite operations.

Bottom line: Massive solar storms could damage the power grid, disrupt the internet, affect GPS and create auroras that reach toward the equator. Will solar flares destroy modern civilization? Nah.
