

What is a container greenhouse?

A container greenhouse is constructed with new or refurbished shipping containers fitted with optimal conditions for plant growth. For best results, you need to position your shipping container in a place where it can get natural light. This means, your shipping container should be away from trees or apartments to avoid sunlight obstruction.

Can a shipping container greenhouse be a good investment?

This means, your shipping container should be away from trees or apartments to avoid sunlight obstruction. If your shipping container greenhouse is enclosed, you may need to incorporate artificial light. A shipping container greenhouse can be a great investment for urban homes seeking fresh farm produce throughout the year.

Can used shipping containers be used as greenhouses?

Greenhouses have become one of the latest innovative applications of used shipping containers. As more people seek ways to access fresh farm produce throughout the year, shipping containers have proven to be effective greenhouse facilities, where people can grow fruits and leafy greens throughout the year.

What are the features of shipping container greenhouses?

Then, let's explore the features of shipping container greenhouses. A shipping container greenhouse works by harnessing the power of controlled environment agriculture (CEA). This means you can control every aspect of the environment inside the container: temperature, humidity, light levels, and even CO<sub>2</sub> levels.

Can a shipping container greenhouse produce high yields?

**High Yields** A single container greenhouse can produce yields comparable to an acre of land. The optimal conditions inside a shipping container allow it to achieve high yields that can serve many households. Even better, these yields are often organic hence promoting a healthier lifestyle across urban populations.

Are container greenhouses cost-friendly?

Though setting up container greenhouses may be expensive, these greenhouses are cost-friendly in the long run. By using modern irrigation systems like hydroponic systems and drip irrigation, these containers can reduce the amount of water consumption by a whopping 90% as compared to traditional farming. Year-round farming
