

Could solar power cause issues in Alice Springs?

While Alice Springs aims to power 50 per cent of its energy needs with renewable sources, solar power could pose challenges. According to the Alice Springs Future Grid website, about a quarter of homes have solar panels, contributing to around 13 per cent of the town's energy. However, adding more solar energy without further planning could lead to instability in the small electricity grid.

How does adding more solar energy affect the Alice Springs grid?

If more solar energy is added without further planning, the small electricity grid could become unstable. According to the Alice Springs Future Grid website, about a quarter of Alice Springs homes have solar panels, and over a year about 13 per cent of the town's energy comes from solar.
