

Should a church install solar energy?

In the age of clean energy and efficient building design, most, if not all, locations can benefit from solar energy, and holy buildings such as churches, mosques, and synagogues are certainly one of them. In this article, we'll explain why congregations of all faiths should consider installing on their community's church.

Why should a church install a solar system?

Installing a solar system at a church can inspire members of the congregation to go green and encourage other businesses and organizations to switch to renewable energy sources. Temple Beth is an example of a large solar installation on a US house of worship, demonstrating the benefits.

How can churches benefit from solar power grants?

Churches can benefit from solar power grants in several ways, such as beginning the use of solar power, funding the construction of a new church, or supporting programs to make the earth a better place. Since churches are considered not-for-profit organizations, there are many opportunities for them to gain grants.

How do church solar panels generate electricity?

Instead of receiving electricity from the grid, church solar panels generate their own electricity from the sun. The generated electricity is monitored by the electric company, but you will not be charged for each kilowatt-hour you use since you're producing it yourself. You will also be able to store the power for later use.

How do I buy a church Solar System?

Sign an 8-year solar lease and purchase the system at the end-of-lease term. Church retains SRECs and associated revenue. This revenue could more than cover the annual lease payments and provide capital to purchase the system at end-of-lease term. Obtain almost all of its electricity for free for at least 10 more years.
