

What is the best type of solar panel financing?

For many people, the best type of solar panel financing is probably a personal loan for solar. A personal solar panel loan will come with fixed interest rates and fixed monthly payments that never change during the life of the loan. Some home improvement loans have higher limits or longer terms to make it easier to pay for more expensive options.

Should you pay for solar panels with a loan?

You still own your solar panels if you pay for them with a solar loan, which means you're eligible for valuable tax incentives like the federal solar tax credit, which saves you thousands of dollars on the cost of your solar system. Low-interest loans are not always the cheapest financing option.

What is a PPA in solar financing?

The third option for financing a new solar system is to enter into a power purchase agreement (PPA). If you choose a solar loan, it's similar to financing a car or paying off your mortgage -- you'll be required to make fixed monthly payments over your loan term, which is usually anywhere from five to 25 years.

Can a home equity loan be used for solar financing?

If you have a lot of equity in your home and prefer to borrow against it for your solar financing, you can also consider a home equity loan or a home equity line of credit (HELOC). Home equity loans work like personal loans, as they have fixed interest rates, fixed repayment timelines and consistent monthly payments.

Is a solar installer a lender?

While installers are often dealers for loans, they're not necessarily the lender themselves. By signing up for a solar loan through an installer, you may be borrowing from a separate loan company that works with the installer.

Do banks offer solar loans?

Many different financial institutions offer solar loans, including local and national banks, specialty financing companies, solar manufacturers, and credit unions. In fact, a loan from a bank may often be the smartest choice when taking out a loan to pay for your solar installation.

Many solar loans use a "combo loan" structure with a short-term portion (about 30% of the cost due within 12 to 18 months) and a longer-term portion (remaining balance paid over 15 to 25 years).
