

How does a solar panel work in a campervan?

A solar panel generates electricity by capturing the energy from the sun. Photons from the sun collide with solar cells inside the panel, knocking electrons loose from their atoms. A typical 14.72-volt solar panel has 32 solar cells.

What can a single 100w solar panel power in a campervan?

For medium to heavy loads, just one 100w solar panel will keep your campervan's battery supplied with all the energy it needs. This doesn't include boiling an electric kettle or running a fridge.
