

How do solar red dots work?

Combining state-of-the-art solar cell technology with proven battery power, our brand new solar red dots feature a dual power system to keep your red dot powered at anytime, anywhere. And forget messing with reticle brightness - an innovative Eclipse Light Management System auto dims and brightens the red dot reticle based on your environment.

How does a red dot work?

Designed to adapt seamlessly to any lighting condition, it delivers a precise point of aim in any shooting situation--near or far, day or day. Armed with Auto D-TEC technology that shifts seamlessly between solar and battery power, so your red dot is always ready and all-around built to last.

What is a Volta red dot?

Volta red dots combine solar and battery power technology with an Eclipse Light Management System to provide a visible red dot in any environment.

Do all Volta red dots come with a cover?

All Volta red dots come standard with a protective rubber cover, low picatinny mount, and absolute cowitness mount. The Sightmark Element Mini Solar is a dual-power red dot able to run off either a single CR2032 battery or solar power.

What is a sightmark Volta solar red dot sight?

**Full Metal Construction:** Constructed with a full metal body, the Sightmark Volta Solar Red Dot Sight is built to withstand rugged use and harsh outdoor conditions. The robust metal construction enhances its durability and longevity.

What is a red dot sight?

**Compact, Enclosed Sight Design:** The red dot sight features a compact and enclosed design, which protects the internal components and ensures a streamlined, sleek appearance on your setup. This design choice enhances both durability and aesthetics.
