

# Solar power s giants are providing more energy than big oil

Will solar power beat oil in 2023?

Clean energy's growing dominance is especially clear when it comes to solar power. In 2023,for the first time,investment in solar energy is expected to beat out investment in oil production. It's a stark difference from what the picture looked like a decade ago,when oil spending outpaced solar spending by nearly six to one.

Are we seeing more investment in energy?

And when it comes to energy,we're seeing more investment than ever: companies,research institutions,and governments are all pouring money into technologies that could help power our world in the future. The International Energy Agency just published its annual report on global investment in energy,where it tallies up all that cash.

Does solar spending really need to keep growing?

Solar spending just needs to keep growingas it has been for that sector to keep pace with the 2050 goal. But there needs to be much more spending in other areas,especially technologies like energy storage and transmission lines--that will help balance the grid as more solar and other intermittent renewable power sources come online.

Are the powerhouses of petroleum more important than a powerhouse?

On a reasonable accounting of things,the latter are just as significant-- if not more so -- than the powerhouses of petroleum. That's a remarkable shift. Around the middle ... AI-powered legal analytics,workflow tools and premium legal &business news.
