

How do I calculate solar energy savings?

Step 1. Subtract any upfront incentives from the total cost of your solar panel system. Step 2. To calculate the amount you save on electricity, multiply the average monthly cost on your utility bills by 12 to get your annual savings. Subtract any annual incentives according to your solar installer. Step 3.

Do solar panels save money?

Shooting for 100% offset, or slightly more, is common and often provides the greatest energy cost savings. However, solar panels can still save you money by offsetting 50% or 75% of your electricity usage. Another major variable that affects savings is the amount of sun your solar panels get, known as solar irradiance.

Are solar panels a good investment?

Solar panels are an expensive initial investment but provide significant savings on energy bills over time. Depending on your area's electricity costs, you could save between \$31,000 and \$100,000 over the lifetime of your solar panel system. The higher your local electricity prices, the greater your potential for solar savings.

How much money can you save with solar?

Most solar shoppers save between \$31,000 and \$100,000 on electricity over the lifetime of their solar panel system. We'll explain how to save money with solar, and how to calculate your estimated savings. Solar panels are an expensive initial investment but provide significant savings on energy bills over time.

Can a solar loan save you money?

Solar loans can provide immediate energy cost savings by replacing your electricity bill payments with lower solar loan payments. However, in the long run, the interest reduces how much you can save with solar panels.
