

Are residential solar systems a good option for South African households?

For South African households, electricity supply from the grid has become increasingly unreliable. The answer to this problem lies in residential solar systems, which harness the power of the sun to provide clean, reliable energy for your home.

Is solar energy a good investment in South Africa?

Environmentally Friendly Solar energy is clean, renewable, and abundant in South Africa. By switching to a solar power system, you'll reduce your carbon footprint and contribute to a greener planet. Increased Property Value Homes with installed solar systems often sell for more.

Why should you choose a solar system provider in South Africa?

As a leading solar system provider in South Africa, we specialise in delivering high-quality, sustainable, cost-effective solar solutions tailored to your unique home and office needs. Find affordable solar for sale to beat load shedding and reduce your electricity bills.

How much solar energy does South Africa use a month?

In South Africa, the average household uses between 900 and 1200 kWh per month, but this can vary depending on the number of occupants, the size of the home, and the appliances you use. There are three primary types of solar systems to consider: grid-tied, off-grid, and hybrid systems.

What size Solar System do you need in South Africa?

Typically, South African households require solar systems with an inverter capacity in the range of 3kW to 12kW, depending on their energy consumption needs. To determine the size of the solar system you need, it's essential to calculate your household's average energy consumption.

How much does a solar system cost in South Africa?

The cost of a solar system in South Africa varies based on the type and size of the system, the quality of the components, and the complexity of the installation. On average, a typical residential solar system can cost anywhere from R60,000 to R200,000 depending on these factors.
