

How do solar roof vents work?

Solar roof vents work by collecting sunlight using its photovoltaic panel which then turns on the fan's motor. The fan then disperses heated air in the attic while intake vents replace it with fresh air. In comparison to wind-powered turbines (colloquially known as whirlybirds), solar-powered roof vents are ten times more powerful.

What is a solar roof vent?

Solar roof vents are solar powered fans that are installed onto a building's roof or gable to cool a building's attic space down during hot days. The mechanical fan is powered by either a mounted solar panel or a solar panel connected to the fan via cables.

Are solar powered roof vents worth it?

Solar powered roof vents are worth it because they can be cost-effective and environmentally friendly to reduce energy bills by up to 30%. Additionally, solar powered roof vents use free energy from the sun to keep attic temperatures at optimal levels.

What is a benefit of solar-powered roof vents?

In general, solar-powered roof vents are much quieter to operate than conventional models that are powered by electricity. You can put solar roof vents on metal roofs just like you can put solar panels on a metal roof.

How to install a solar roof vent?

Installing a solar roof vent is simple: cut a hole in the roof (two holes if you purchase multiple fans). Ensure the housings are properly flashed to maintain the integrity of your roof. No electrician is needed.

Are solar roof vents a good option for attic ventilation?

As home owners resort to being more energy efficient and environment friendly, the popularity of attic ventilation through solar roof vents has experienced an increase. Not only do these solar systems regulate temperatures in attics but they also help in the saving of energy by reducing the intake of air during warmer months.
