# **SOLAR** PRO. Solar thermal power generation system

#### What is solar thermal power generation?

Harnessing solar energy for electric power generation is one of the growing technologies which provide a sustainable solution to the severe environmental issues such as climate change, global warming, and pollution. This chapter deals with the solar thermal power generation based on the line and point focussing solar concentrators.

#### What is a solar thermal power plant?

A solar thermal power plant is a type of high temperature solar thermal energy system. In these plants, solar radiation is concentrated at one point to produce steam, which drives a steam turbine. The turbine then converts the energy to mechanical energy to drive an electric generator.

#### What is solar thermal energy?

Solar thermal energy is the transformation of solar energy into thermal energy. It is a form of renewable, sustainable, and environmentally friendly energy.

#### Can solar thermal energy systems replace conventional energy sources?

Hence, there is tremendous opportunity to replace conventional energy sources with solar thermal energy systems. Solar thermal systems are used as a heat source for small individual home applications to large-scale applications such as space heating, cooling, water heating, heat for process industries and power generation, etc.

Is solar thermal energy a suitable solution for process heat applications?

Heat energy is preferred as compared to electrical energy to meet the energy requirement of various applications in the process industries. Therefore, the solar thermal energy system is considered to be one of the attractive solutions for producing thermal energy for process heat applications.

What are the energy support systems for solar thermal facilities?

Solar thermal facilities need energy support systems to prevent a lack of solar radiation or a consumption higher than the dimensioned. These energy support systems can be from various sources: Directly from the electricity company's network. Other sources of renewable energy - for example, wind energy.
