

What is a shipping container vent Kit?

The shipping container vent kit by CON-VENTS is an effective product for preventing moisture from building up. It comes with two vents that are designed to each end for cross ventilation. This product itself is designed to cover a 20 feet container. It can be placed anywhere, such as the side doors or windows.

Do shipping containers have ventilation holes?

Most shipping containers will have built-in holes to act as ventilation. But the problem is that these holes aren't enough for this situation. It's best to install a ventilation system such as having intake vents, louver vents, or even a window.

Do you need a vent for a sea can?

If condensation does become an issue, installing proper ventilation will prevent any problems in the future, such as mould or mildew growing inside your sea can. If you need a vent that exchanges air within the container consistently, check out Container Modification World's Solar Powered Exhaust Vent.

Does a shipping container home need a ventilation system?

One reason that a shipping container home will require a ventilation system because it may overheat, and moisture-sensitive goods can be damaged. Most shipping containers will have built-in holes to act as ventilation. But the problem is that these holes aren't enough for this situation.

How often do you need a vent in a container?

If you need a vent that exchanges air within the container consistently, check out Container Modification World's Solar Powered Exhaust Vent. This vent will exchange the air every three minutes in a 20' container, and every six minutes in a 40' container. It will eliminate moisture and excess heat.

Do you need a container vent?

For some people, the one vent that is pre-installed into the container may suffice to promote airflow. Also, a container vent typically has a triple-layered screen to block the entry of insects. Some areas have climates with low humidity, which means you might not need any type of intake vents. But how many vents would you need?
