

What is a self-contained compactor?

Self-contained compactors are appropriate for scenarios involving wet garbage. The machine and container are coupled in these compactors. When filled, the whole unit is transported and emptied before being returned to its original location. The garbage is never moved into another container and is dropped straight into the landfill.

What is a mobile compactor?

Mobile compactors are liquid-tight units that can handle both wet and dry waste. Since the compactor and container are integrated into a single unit, they are very effective for industries with high volumes of wet waste. Mobile compactors prevent leaks and odours, making them ideal for organic waste management.

What is a wet waste compactor?

Wet Waste Compactors are portable machines that have been specifically designed to compact wet waste materials. We supply a range of portables designed by Bergmann. Static compactors are designed to stay on your site and when the container is full, it is taken away for emptying and a replacement bin is put into position.

Are mobile compactors a good choice for organic waste management?

Mobile compactors prevent leaks and odours, making them ideal for organic waste management. Stationary compactors are designed to stay in place while a detachable container is hauled away for disposal.

What is a waste compactor?

A waste compactor is perfect for dealing with high volume, low weight waste, and is ideal for housing recyclable material. If you are considering hiring or purchasing a compactor, speak to us today.

What is a food industry compactor?

Food Industry Compactors: Hotel and restaurant garbage is mostly organic; therefore, compacting it enables optimal recycling. It also prevents the waste from entering sewage systems. Self-contained compactors are appropriate for scenarios involving wet garbage. The machine and container are coupled in these compactors.
