What is a sundial used for?

A sundial is an instrument for measuring time based on the detection of the position of the Sun. It consists of a stylus, called the gnomon, which casts its shadow on the plate (or dial) of the watch, allowing timekeeping.

How did the Sundial program function?

The Sundial program functioned with a formal near-peer mentoring structure, where mentors and mentees were assigned to each other. This was chosen to provide explicit support to incoming students, in contrast to informal relationships which develop more organically between junior and senior members of a community (Jacobi 1991).

What is Sundial a part of in physics education?

Sundial is a member program of the Access Network, a national network of programs intended to broaden access to careers in physics, particularly for traditionally underrepresented students.
