

What is a solar power bank?

Solar Power Banks are amazing devices that can harness the sun's energy to provide off-grid power. They can come in handy during camping trips, charging your camera's battery after a long day taking beautiful pictures, for instance.

Can you use a solar power bank while charging?

Although technically, you use your solar power bank while it's charging (in an emergency, for instance), this practice isn't recommended. Doing so frequently may result in your solar power bank not charging or charging erratically. When you do this, the power banks' battery is in line (or in series) with the gadget.

Why is my solar power bank not charging?

Doing so frequently may result in your solar power bank not charging or charging erratically. When you do this, the power banks' battery is in line (or in series) with the gadget. The result is a higher power draw which leads to excessive heating that can damage your battery. 3. Your solar panel isn't getting enough sunlight

Should I recharge my solar power bank before draining it?

We recommend that you recharge your solar power bank before you drain it completely. If you drain your power bank completely, it'll require more energy to get going again instead of charging it from a 50% state of charge.

What happens if you drain your solar power bank?

If you drain your power bank completely, it'll require more energy to get going again instead of charging it from a 50% state of charge. As a result, if you deplete your solar power bank entirely, it might take even longer to charge with solar, or in a worst-case scenario, it might not charge at all.

What happens if a solar power bank doesn't get enough Lux?

If they don't receive the minimum amount of lux, they won't start charging via solar. The following image showing the charging instructions of a standard solar power bank serves as an example. Notice that it requires a minimum of 25,000 LUX sunlight to charge via solar. 4. Wrong or broken charger/power cable
