

What is the difference between Tough Solar and solar powered?

To my understanding, the main difference between Tough Solar and Solar Powered is the fact, that the Tough Solar models use solar energy as the only external energy source, while the Solar Powered models have electrical charging option as well. SP models have more power drain functions and features.

What is a tough solar watch?

"Tough Solar" are watches that rely solely on solar recharging. G shocks that are solar powered but main method of charging is via a cable are "Solar powered". "Tough Solar" are watches that rely solely on solar recharging. See the edifice models and the standard Casio models discussed above, they run on solar charging too. Just advertising copy.

What powers a Casio Tough Solar watch?

This Casio watch is powered by Tough Solar technology which means it uses light (even artificial) to charge up the timepiece.

Are G Shocks solar powered?

G shocks that are solar powered but main method of charging is via a cable are "Solar powered". "Tough Solar" are watches that rely solely on solar recharging. G shocks that are solar powered but main method of charging is via a cable are "Solar powered". "Tough Solar" are watches that rely solely on solar recharging.

Which watches have a 'tough solar' movement?

In G-Shocks, the first watch to have this change was the GBD-H1000. The H2000 and the H5600 followed suit. My analogue Frogman has a 'tough solar' movement and they were released in mid-2020.

This original solar power system transforms even weak light from sources such as fluorescent lamps into ample energy to provide stable operation of various high-load functions.
