

Does Tucson Electric Power have net metering?

Consumers of Tucson Electric Power can take advantage of net metering, which is a positive for both parties. Without net metering, solar panel installation is significantly less economically realistic, as citizens have no way to sell excess electricity back into the infrastructure system.

How long does it take to install a solar system in Tucson?

It takes between 2 to 4 weeks to get a solar system up and running with TEP. TEP requires solar customers to use Time of Use rates, which may lower solar savings a bit. How much does a solar system cost in Tucson with TEP? Most homeowners will pay around \$2.60 per watt of solar installed.

Does TEP offer net metering for solar customers?

TEP does not offer net metering to their solar customers. Instead, they offer a net billing program. Although they sound similar, the key difference is that net billing provides lower solar savings than net metering. When a solar panel system generates more electricity than a home uses, that extra electricity has to go somewhere.

How much does it cost to install solar in TEP?

Homeowners in TEP's service territory typically pay around \$2.60 per watt for solar installation. To cover a \$150 electric bill, a homeowner would need a 10.73 kilowatt (kW) solar system, which would cost approximately \$27,900 before any incentives are applied.

Who is a written content manager at solarreviews?

At SolarReviews, Catherine is the Written Content Manager. She has been at the forefront of researching and reporting on the solar industry for five years and leads a dynamic team in producing informative and engaging content on residential solar to help homeowners make informed decisions about investing in solar panels.

How much does a single solar share cost?

Each \$1.50 solar share is equal to 150 kWh of solar energy. If you use 750 kWh of electricity in a month and want all your electricity to come from solar, you would need to purchase five shares, adding \$7.50 to your existing electric bill.
