

What foods are high in healthy fats?

Foods high in healthy fats include nuts, seeds, fatty fish, eggs, avocado, olives, tofu, and more. Monounsaturated fat foods are mostly plant-based and seafood.

What foods contain saturated fats?

Saturated fats are found in animal products such as cheese, cream, lard, and butter. Some plant-based foods like coconut oil and palm oil also contain saturated fats. The American Heart Association (AHA) recommends limiting saturated fat intake to 5%-6% of daily calorie intake.

What are the main types of dietary fats?

There are two main types of dietary fats: saturated and unsaturated. Saturated fats, also known as 'solid fats', are typically solid at room temperature and found in animal products like cheese, cream, lard, and butter, as well as some plant-based foods such as coconut oil and palm oil.

What are the recommended fats to consume?

Health experts recommend swapping out foods high in saturated and trans fats with foods high in unsaturated fats, like those below. The DGA recommends keeping trans fat intake as low as possible as diets high in saturated and trans fats are tied to increased risks of stroke and heart disease.

Which foods are high in healthy unsaturated fats?

For a healthy diet, consider foods high in unsaturated fats like macadamia nuts and eggs. Macadamia nuts are low in sodium and carbohydrates, while eggs have the majority of their fat as unsaturated.

What are some examples of unsaturated fats?

While saturated fats solidify more easily, olive oil and canola oil are unsaturated fats. They are structured in a way that keeps them liquid at room temperature. For example, butter and bacon grease are saturated fats.
