

What is Xpanse TM solar awning?

"Xpanse (TM) is without competition. It's so much more innovative and better made than anything else in the RV industry." The Xpanse(TM) solar awning features rigid and robust solar panels that are designed for performance and durability.

Are solar awnings wind tolerant?

Built using traditional solar materials, these glass-based solar panels are very shade tolerant and designed to last for years. The awning has an innovative design that allows wind to pass through gaps between the panels when the awning is retracted slightly, which enables impressive stability in windy conditions.

Will a 16x7ft awning damage my RV solar panels?

The awning passed the testing with no damage to the RV solar panels or the awning structure. The support arms have been tested over 2000 extend/retract cycles with loads significantly higher than the weight of the 16x7ft awning and confirmed their performance and durability.

How does a wind awning work?

The awning has an innovative design that allows wind to pass through gaps between the panels when the awning is retracted slightly, which enables impressive stability in windy conditions. In extreme weather conditions, the awning automatically retracts completely.

Does an awning retract if wind speed crosses a threshold?

The awning also has built-in intelligence that can monitor wind speed and automatically trigger a slight retraction when needed. The awning will also completely retract when wind speeds cross a preset threshold to ensure safe operation.

The Xpanse Solar Awning is compatible with most RVs and many caravan brands as well, and can power most appliances depending on usage patterns. "Solar is the preferred source of power for RVs, but let's face it, roof ...
